When con-BASIC CONCEPTS OF STRUCTURAL DYNAMICS 1.1 THE DYNAMIC ENVIRONMENT Structural engineers are familiar with the analysis of structures for static loads in which a load is applied to the structure and a single solution is obtained for the resulting displacements and member forces. When con-basic principle of Structural Dynamics. This law states that the resultant force on a body is equal to its mass times the acceleration induced. Therefore, just as the 1st ndlaw of motion is a special case of the 2 law, static structural analysis is also a special case of Structural Dynamics.
